

Synthetic DiD Results — CA Paid Family Leave (2004)
Effect on Female LFP Rate, Women 25-54

	Baseline SDiD	Robust SDiD
ATT estimate	+0.66 pp	+1.19 pp
Standard error	(0.50)	(0.49)
95% CI	[−0.31, +1.63]	[+0.23, +2.15]
Jackknife p-value	0.191	0.019
Permutation p-value	0.581	0.326
Pre-treatment RMSPE	0.774 pp	0.726 pp
Donor states	43	43
Treatment window	2004–2015	2007–2015
State × year obs.	924	924

Significance: Jackknife p < 0.05 indicates statistical significance.

Note: Both specs use the same corrected 43-state donor pool (excl. TDI states NY, RI, HI; own-PFL states NJ 2008, WA 2007; AK; DC). Baseline uses the full 2004–2015 post window; robust spec restricts to 2007–2015 to exclude the low-uptake adjustment period. SE in parentheses. Jackknife p-value from leave-one-unit-out jackknife; permutation p-value from in-space placebo test across donor states.
